

Linked List Operations:

① Insert $\rightarrow$ Head
Tail
after specific

② Delete $\rightarrow$ Head
Tail
Target

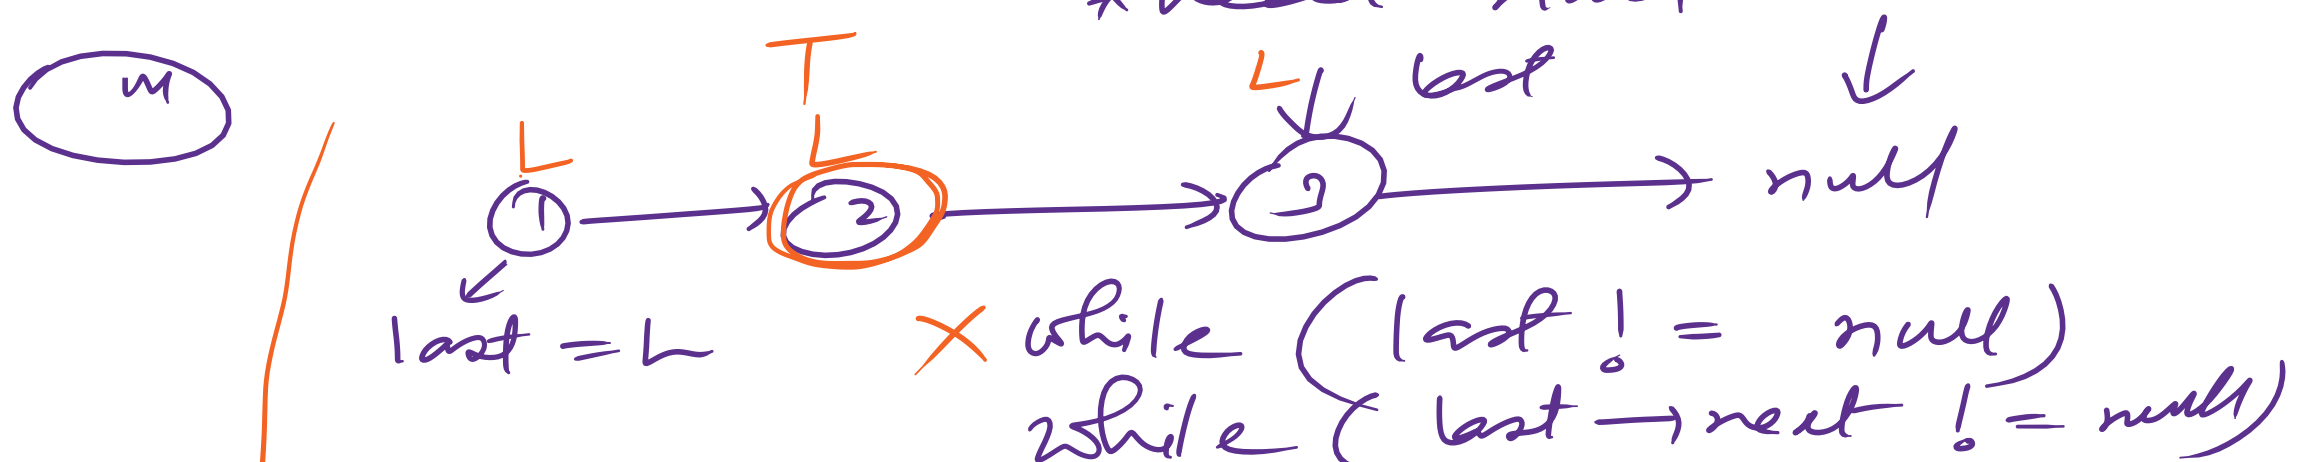

Delete Front/Head $\rightarrow$ ① Empty $\rightarrow$ Can't del return;
delete h Node * temp = h
h = h -> next
delete temp

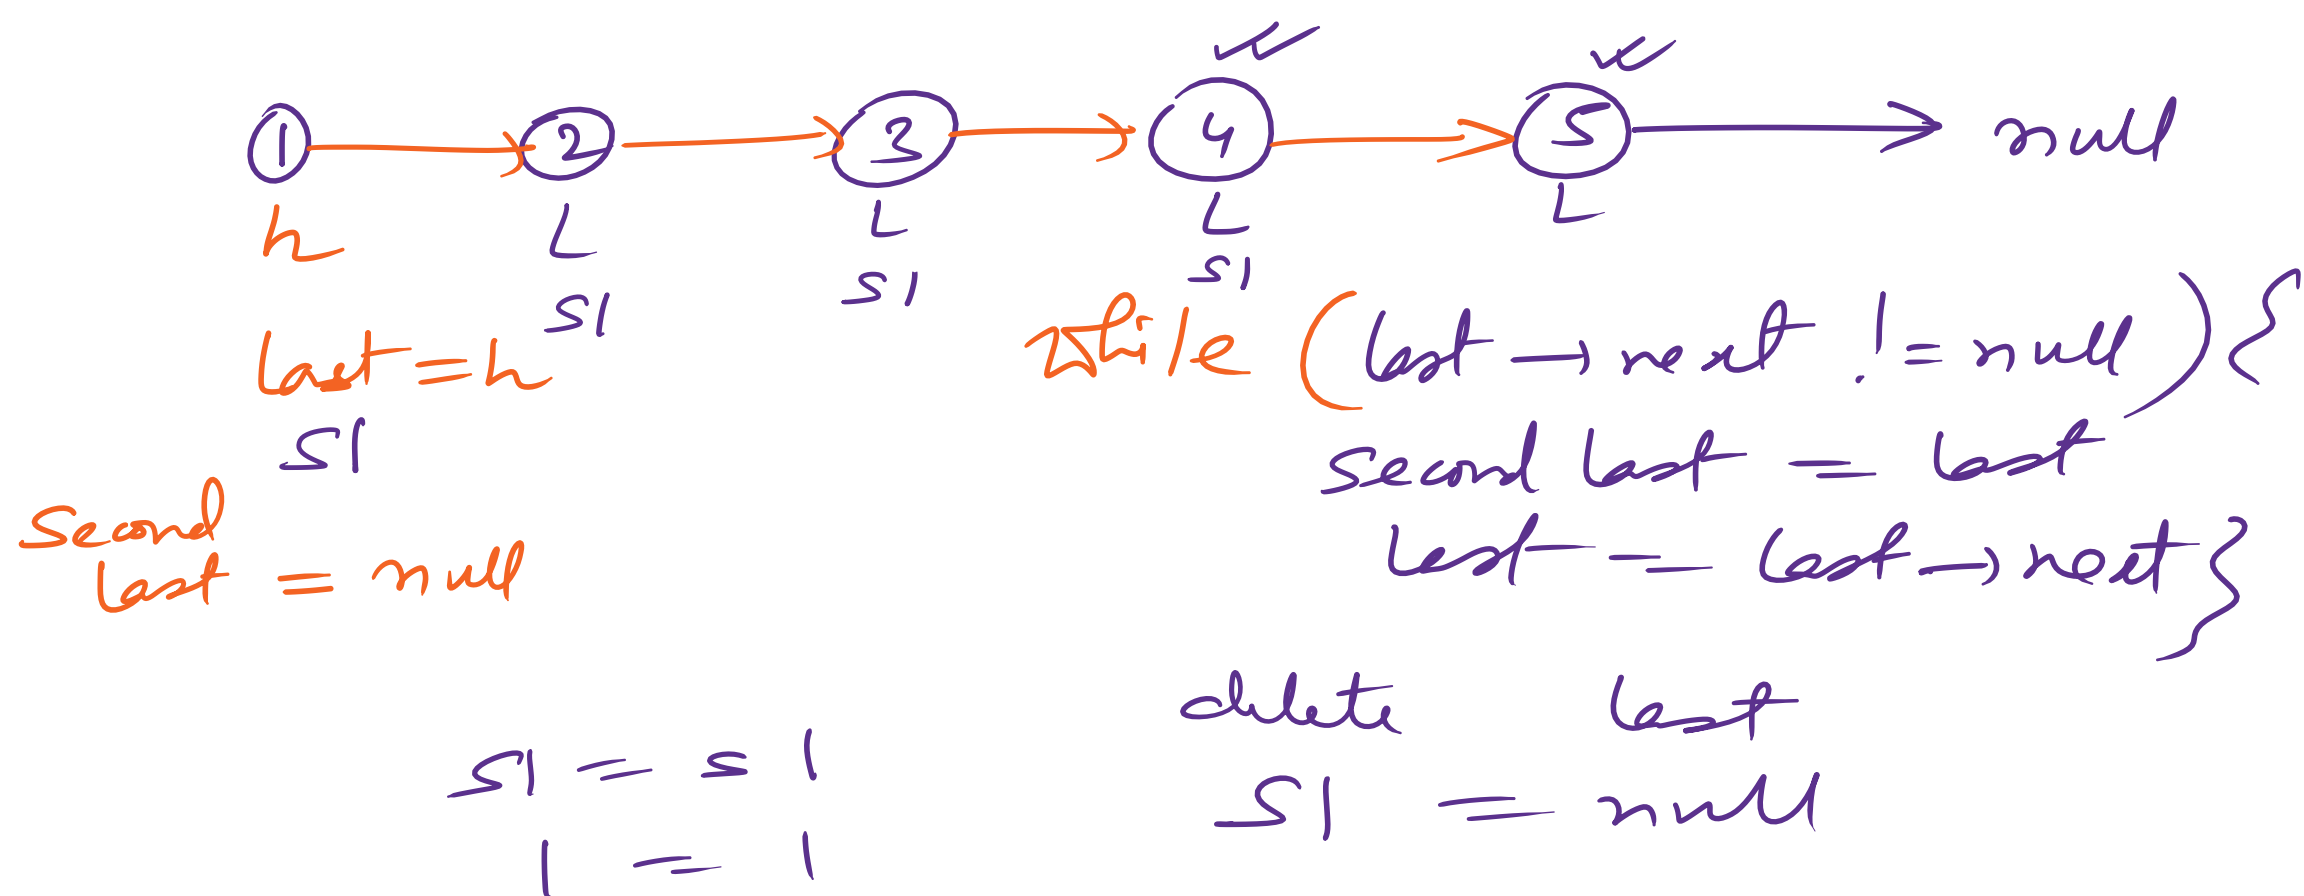

Delete Tail Node:

① Empty $\rightarrow$ Can't delete; return;

② Single Node $\rightarrow$ *head $\rightarrow$ next == null
del *head
*head = null

This process will not work because we can't traverse back & update the tail

Node * temp = h

(*head) = (*head) -> next
delete temp
