

Association: It is the relation between objects of a class within an application. It can be of two types:

(i) Aggregation:
HAS-A Relationship

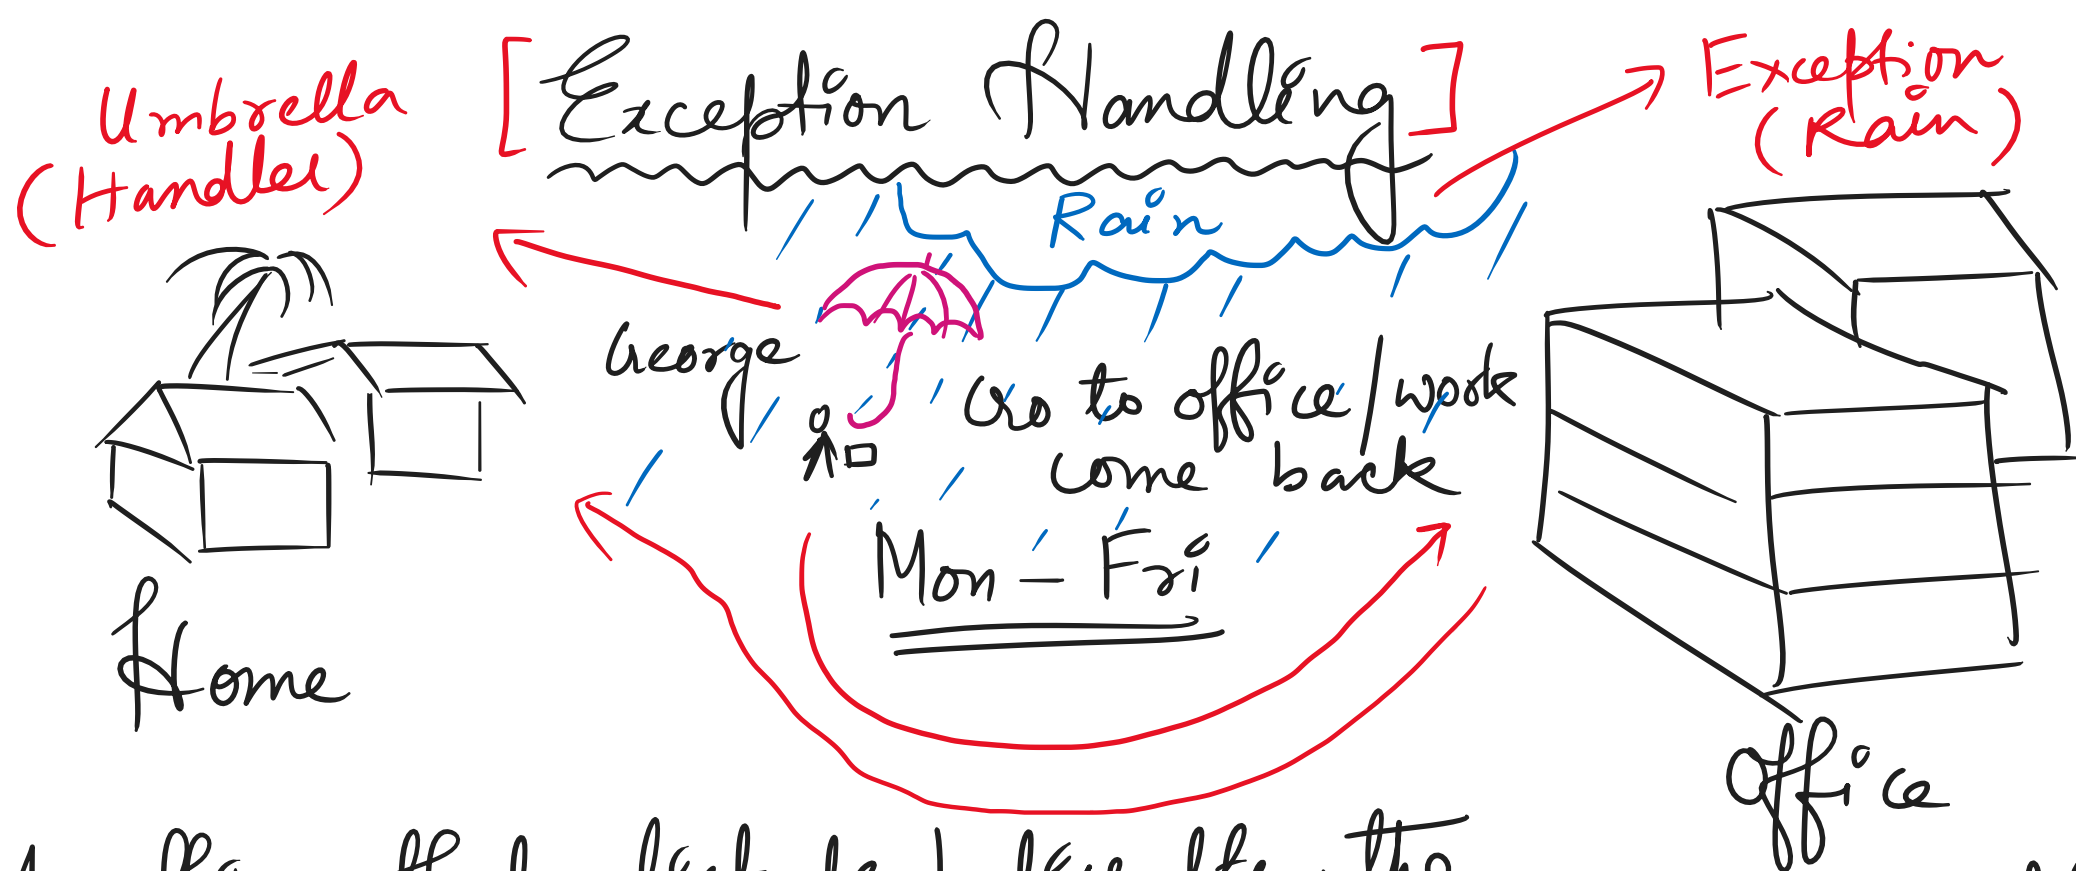

Car has a MP3 player.

(ii) Composition:
IS-A Relationship

Car
↓
BMW
wheels
steering
engine

BMW is a car.

Anything that disturbs / disrupts the normal flow of code execution, is called an exception. The process of handling exceptions is called **Exception Handling**.

Types of Exceptions:

(i) Checked → Known Exceptions.

(ii) Unchecked → Unknown Exceptions.

(iii) Custom / User-defined Exceptions.
